Find your Joomla module positions

Posted by joomtorial - 10 May 2009 03:33

_____

Hi all,

Sometimes Joomla templates can have many modules and when working in your Joomla websites you don't always know all module positions by heart. There is a simple trick to find the position of your Joomla's template module position which works for Joomla 1.0.x as well as for Joomla 1.5.x versions.

It's very simple: behind your your domain url, type: index.php?tp=1

It should become something like: http://www.yoursite.com/index.php?tp=1

A preview of how this would look in a Joomla 1.5.x site can be seen by clicking the picture below:
