Issue with the editor(s) - default + JCE
Posted by shanna1950 - 21 Jan 2010 13:04

_____

Hi,

Don't know if you can help me out.

I recently installed JCE, and afterwards all text I put in, gets bold. Not visible in the editor, but when published there it is... I looked in the html source of the editor. No bold tags, or header tags or anything that could indicate the bold text.

I even added the text, without any tags right into the html box of the editor, and surprise, surprise, still BOLD...??

Checked a lot of other options in the JCE configuration, but to no avail.

Then I decided to choose for the default editor again (not such a great idea, of course) but...The text remains BOLD??? Odd huh..

I've googled for a solution, I don't see any topic concerning this problem.

Do YOU have a clue how this can be solved?

Thanks.

Sher

_____

Hi,

I think this is perhaps not an editor issue, but a template CSS issue.

When you have a link to your website and can post it in the forum here (or PM me), I am 99.99% sure I am able to tell you what causes the problem.
