

Modifying A Rockettheme Template

Posted by paul50 - 26 Jan 2010 20:25

Hi everyone,

I'm new to website building and I have no knowledge in this field. I'm using joomla to build my website and I already have a host where I have download joomla via my hosting company. I've downloaded a rockettheme template and uploaded it in joomla but I do not know how to customize the template or make changes to the layout of it. I will be grateful if someone could advise me. I've managed to copy and paste the website page to a word file but I can't past it here for you to see.

Kind Regards

Paul

Modifying A Rockettheme Template

Hi Paul,

I think you will have to be in the Main Menu to solve this. It looks to me all 3 menus are pointing to the same article.

So where you created your 3 menus, on the right hand side, you should be able to choose/pick a different article per menu. It looks to me you have been copying menus and renaming them and that would lead to menus leading to the same articles.

Will it be best to create new subjects for different questions I have or are you happy with everything under one subject title 'Modifying A Rockettheme Template'

If you can create new topics that would fit a certain category in the forum, please do so. It may be more helpful and would give a better overview on problems for other users here too.

Modifying A Rockettheme Template

Hi Piet, I understand it clearly now. I needed to create a new article in the article manager which I could then link the corresponding page to in the main menu and from the select article drop down menu on the right, I can choose the article that I created with the correct content I added. Any new questions I have I'll create a new subject.

Thanks once again for advising me on this.

kind Regards

Paul
