

How to add text to an existing brochure on Joomla

Posted by paul50 - 28 Jun 2010 22:58

Hi Piet

I've scanned an image and I'm trying to add text to it in joomla. I would like the text to be next to each symbol but when I'm in joomla article manager and try to type the text, the curser goes to the bottom of the image. There are five icon images and each one needs to have different information beside it. The url is <http://www.redrouteparking.com/componen ... article/66>

You can also get to the page from my hompage by clicking on the blue image at the bottom of the website that has the five icons together as one picture.

While in article manager I've also tried typing the text and leaving the neccessary space between the next image. (just like I would if writing using paragraphs) I've also left a big enough space on the left of the text so i can insert the scanned image, but when the image is inserted it replaces the text information. If you have some time I'll be grateful if you can advise me.

Kind Regards

Paul

Hi Piet

I've solved the issue by using a table in the article manager.

Regards

Paul
