_____

How would you place an organizational chart graphic on a Joomla website with multiple links on the graphic to various pages?

Hi Rob,

Assuming you have an html editor like MacroMedia (or nowadays Adobe) DreamWeaver, I would advise to use "hotspots".

Create a new html page. Insert your image in that page and then for the image, you are able to draw hotspots for the areas you wish. Those areas (hotspots) can have the url's you want.

Once you have created the DreamWeaver page, you will need to go into source view and copy the html code. In my sample the code would be in between the and tags (DO NOT COPY THOSE!)

So the code of my sample to use in Joomla is:

When you want to use this code in Joomla, you can't simply use the WYSIWYG editor. You will need to

go to Joomla's Global Configuration and set your editor to "No Editor". Only then paste the code from DreamWeaver otherwise your WYSIWYG Joomla editor will rewrite and leave important codes out.

I created a working sample of this and that can be seen here: http://joomla15.joomtorial.com/index.ph ... &Itemid=53

Sounds like a plan!

Thanks!
